RE: Reference for Everest InvisaShield
Louisiana State Capitol COVID-19 Response Facility Services
For Louisiana Legislative Budgetary Control

To Whom It May Concern:

Everest InvisaShield (Everest) has been a pleasure to work with throughout our current sanitization and disinfection of the Louisiana State Capitol project. Since award of the contract, the Everest team has proven time and again, the vast experience and knowledge of their patented sanitization products and the detailed application process required to offer enduring resilient protection.

Within hours of award Everest mobilized their team of experts to begin initial testing and assessment of the unique conditions of the space. Everest has been a significant contributor of ideas on how to navigate the delicate intricacies of the facility, specifically with their handling of the historic building fabric. They are efficient, resourceful, and understand the needs and constraints of working within expedited timeframes and with multiple governmental regulatory bodies.

To verify maximum treatment of the space and full coverage of surfaces, the Everest team performed thousands of testing samples to record pre- and post-treatment conditions. These testing efforts are then delivered to our client in detailed reports giving absolute clarity to the effectiveness of their process. Our clients are appreciative of both the level of sanitization of their facility and the manner in which it was achieved.

We look forward to continuing our partnership with Everest in the future. If you have any other questions or would like to discuss our recommendation of Everest further, please do not hesitate to reach out to my office at (225) 570-3377.

Sincerely,
